

## ESSENTIAL OMEGA-3 FATTY ACIDS

You may already know about the importance of the omega-3 fatty acids, eicosapentaenoic acid (EPA) and docosahexaenoic acid (DHA) to human health. These fatty acids also play an important role in the health of your dog during all stages of life. When given at appropriate levels, EPA and DHA have been shown to help support skin and coat health and overall wellness, including brain and nervous system development, trainability, the joints, heart, and kidneys in addition to helping support the immune system.

- **A high-potency fish oil**  
A rich source of omega-3 fatty acids EPA and DHA derived from salmon and other cold water fish.
- **Tasty formulation**  
Dogs love it!
- **Bioavailable formulation**  
Active ingredients in a bioavailable formulation for dogs.
- **Convenient packaging**  
Bottles with a flip top lid for easy dispensing and an accompanying spoon to measure an appropriate amount of Welactin. Also available in 120 count softgel caps.

## WELACTIN<sup>®</sup> 3 Canine

**A natural way to support skin and coat health plus a lifetime of overall wellness for your dog**

## WELACTIN<sup>®</sup> 3 Canine

**Omega-3 Fatty Acid  
Supplement for Dogs**

**For The Life Of Your Dog**

## Healthy Beginning

The omega-3 fatty acids eicosapentaenoic acid (EPA) and docosahexaenoic acid (DHA) have been found to help support skin and coat health, joint health, and immune system function, which is important in young dogs.

DHA is a major structural component of the brain. It is the most abundant fatty acid in the brain and plays an essential role in the development of the retina and the central nervous system. Some recent studies show that feeding diets enriched in DHA enhances intelligence and trainability of puppies.

Synthesis of the long chain omega-3 fatty acids, especially DHA, is limited in the body and, therefore, may need to be supplemented in the puppy's diet. Welactin Canine provides bioavailable EPA and DHA.

**Welactin<sup>®</sup>  
Canine  
supplements  
EPA and DHA  
for a healthy  
beginning of  
your dog's life.**

## Prime of Life

After growth has been completed, dogs are at their prime of life. Although this may be the best time in the life of your dog, it is at this stage that some dogs start developing health issues primarily associated with skin/coat and joint health.

A balanced intake of omega-3 and omega-6 fatty acids has been associated with supporting or improving skin/coat and joint health. Welactin Canine provides an excellent source of long chain omega-3 fatty acids that are often in limited amounts in a dog's diet.

It is important to supplement bioavailable omega-3 fatty acids during the prime years to help maintain the proper function of major organs and the immune system.

**Welactin<sup>®</sup>  
Canine helps  
maintain your  
dog at the  
prime of life.**

## Golden Years

Senior dogs may face an increased risk of compromised organ function as they age. It has been found that some of these issues may be reduced with a diet enriched with long chain omega-3 fatty acids. These fatty acids have been associated with supporting kidney, heart, joint, and neurological function.

The omega-3 fatty acids as found in Welactin Canine can enable your dog to experience an enhanced quality of life. Welactin Canine provides a concentrated source of EPA and DHA which are beneficial to help support the overall wellness of your senior dog.

**Welactin<sup>®</sup>  
Canine helps  
to keep your  
dog healthy  
and active in  
the golden  
years.**
